Whats reports should a multi-tenant property management system produce

Assistant

A multi-tenant property management system (PMS) must deliver reporting capabilities that serve **property managers, owners/investors, tenants, vendors, and compliance officers**. The reports should be categorized by function, configurable by role, and capable of scaling across portfolios. Below is a structured breakdown of essential reports, their purpose, and multi-tenant-specific considerations.

◆ 1. Financial & Accounting Reports

Report	Purpose
Rent Roll	Real-time list of active tenants, lease terms, rent amounts, payment status, and due dates
Accounts Receivable/Payable Aging	Tracks overdue tenant payments and pending vendor invoices by property/portfolio
Income Statement (P&L)	Revenue vs. expenses per property, portfolio, or department (monthly/quarterly/annual)
Cash Flow Statement	Tracks inflows/outflows, reserves, and liquidity across managed assets
Security Deposit Ledger	Deposit balances, deductions, interest accruals, and return timelines
Late Fee & Penalty Tracker	Revenue from fees, waiver history, and tenant compliance trends
Tax Summary Report	1099-MISC/NEC, VAT/GST, local lodging/rent taxes, and year-end tax packages
Bank Reconciliation Report	Matches PMS transactions with bank/credit card statements

◆ 2. Operational & Maintenance Reports

Report	Purpose
Work Order Dashboard	Open/closed requests, priority levels, vendor response times, and cost breakdowns
Vendor Performance Report	SLA compliance, cost per job, rating history, and contract utilization
Vacancy & Turnover Report	Unit availability, lease expiration dates, move-in/out timelines, and re-renting costs
Inspection & Compliance Log	Move-in/out inspections, safety checks, and regulatory deadlines per property
Supply/Inventory Tracker	(If applicable) Maintenance supplies, consumables, and reorder alerts

◆ 3. Tenant & Lease Management Reports

Report	Purpose
Lease Expiration & Renewal Forecast	Upcoming renewals, rent adjustment history, and renewal probability scores
Tenant Communication Log	Automated/manual outreach history, notices served, and response rates
Eviction & Legal Action Tracker	Case status, court dates, attorney costs, and recovery rates
Background/Credit Summary	Screening results, approval/denial reasons, and fair housing compliance flags
Rent Control/Price Limit Report	Tracks rent increases against local ordinances and caps

◆ 4. Performance & Analytics Reports

Report	Purpose
Occupancy & Absorption Rate	Historical & projected occupancy, lease-up velocity, and unit mix analysis
Rent vs. Market Comparison	Competitive positioning, rent optimization insights, and concession tracking
Delinquency & Collections Report	Aging buckets, payment plan tracking, and third-party agency handoffs
Tenant Retention & Churn Analysis	Move-out reasons, renewal rates, and satisfaction correlation metrics
Operating Expense Ratio (OER)	Expenses as % of effective gross income per property/portfolio

Report	Purpose
ROI/NOI Report	Net operating income, cap rate, and cash-on-cash return for investors

◆ 5. Multi-Tenant & Owner/Client Reports

(Critical for SaaS PMS serving multiple PM firms or property owners)

Report	Purpose
Consolidated Portfolio P&L	Aggregated financials across all managed properties or client accounts
Owner/Investor Statement	Customizable reports showing income, expenses, distributions, and equity
Revenue Share Report	Commission splits, management fees, and performance-based payouts
Client/Manager Performance Dashboard	KPIs per PM firm or branch: collection rate, maintenance SLA, tenant satisfaction
Audit Trail Report	Immutable log of user actions, data changes, and payment approvals

◆ 6. Compliance & Regulatory Reports

Report	Purpose
Fair Housing Compliance Report	Screening consistency, accommodation requests, and bias risk indicators
Safety & Code Violation Tracker	Fire, electrical, plumbing, and structural inspection deadlines
Data Privacy Report (GDPR/CCPA)	Tenant data access, retention, and deletion requests
Rent Stabilization Report	Automated rent increase limits, allowable adjustments, and filing requirements

🔧 Key Technical & UX Requirements for Reporting

1. **Role-Based Access Control (RBAC):** Owners see only their properties; PMs see assigned portfolios; tenants see personal statements.
2. **Real-Time vs. Scheduled:** Core financials update in real-time; heavy analytics run on schedules to avoid performance hits.
3. **Drill-Down Capability:** Click from portfolio → property → unit → transaction → source document.

4. **Multi-Currency & Localization:** Support regional tax formats, date/currency standards, and language localization.
 5. **Export & Integration:** PDF, CSV, Excel, and direct sync with QuickBooks, Xero, SAP, or BI tools (Power BI, Tableau).
 6. **Custom Report Builder:** Drag-and-drop fields, saved templates, and scheduled email delivery.
 7. **Data Isolation:** Strict tenant segregation in multi-tenant SaaS architecture (row-level security, schema isolation, or multi-database per tenant).
-

Pro Tips for Implementation

- **Predictive Analytics:** Add AI-driven churn risk, rent optimization, and maintenance forecasting.
- **Automated Notices:** Tie reports to automated late fee triggers, lease renewal reminders, and compliance alerts.
- **Audit Readiness:** Ensure all reports are exportable with metadata, timestamps, and user attribution for SOX/GDPR/Fair Housing audits.
- **Tenant Portal Reports:** Give renters access to payment history, lease documents, work order status, and move-out checklists.

A well-designed reporting suite in a multi-tenant PMS doesn't just track history—it drives retention, optimizes cash flow, ensures compliance, and scales across portfolios without performance degradation. Prioritize **configurability, data isolation, and stakeholder-specific views** during development.

User

What about unit list and arrears

Assistant

Here's a focused breakdown of the **Unit List Report** and **Arrears Report**, including what they should contain, why they matter, and how to design them effectively in a multi-tenant PMS.

1. Unit List Report (Unit Status/Inventory Tracker)

Purpose: Provides a real-time, portfolio-wide snapshot of all rental units, their occupancy status, lease terms, and operational readiness. It's the foundational report for vacancy management, lease renewals, and maintenance planning.

Essential Fields/Columns

Field	Why It Matters
Property / Building / Floor	Portfolio hierarchy navigation
Unit Number / Suite ID	Unique identifier
Unit Type & Size (sq ft, bedrooms)	Market positioning & pricing
Current Status	Vacant, Occupied, Under Maintenance, Reserved, Hold, etc.
Tenant Name & Contact	For renewals, notices, or outreach
Lease Start / End Dates	Renewal forecasting & compliance
Contract Rent vs. Market Rent	Pricing gap analysis & concession tracking
Security Deposit Balance	Liability tracking & move-out prep
Last Inspection / Compliance Date	Safety & code adherence
Active Work Orders	Maintenance readiness before turnover
Last Updated Timestamp	Data freshness & audit trail

Multi-Tenant PMS Considerations

- **Dynamic Filtering:** Allow clients to filter by property, status, lease type, or manager. Save custom views per role.
- **Real-Time Sync:** Pulls live data from lease, maintenance, and accounting modules. Avoid stale snapshots.
- **Role-Based Visibility:** Owners see net vacancy & rent gaps; PMs see full operational status; field staff see maintenance/compliance flags.
- **Export & Mobile Access:** PDF/Excel export for leasing teams; mobile-optimized for property walk-throughs.
- **Drill-Down:** Click any unit → lease details → payment history → work orders → document archive.

Implementation Tips

- Use color-coded status badges (e.g., green=occupied, red=vacant, yellow=maintenance).
- Add a "Turnover Readiness Score" (e.g., % of tasks completed post-move-out).
- Integrate with CRM/leasing tools to auto-flag units approaching vacancy.

2. Arrears Report (Delinquency/Overdue Rent Ledger)

Purpose: Tracks tenants who owe rent or ancillary charges beyond due dates. Critical for cash flow forecasting, collections prioritization, legal readiness, and financial reporting.

(Note: "Arrears" is standard in UK/Commonwealth; US systems often call this "Delinquency" or "Overdue Rent" report.)

Essential Fields/Columns

Field	Why It Matters
Property / Unit	Location & asset context
Tenant Name & Contact	Outreach & legal documentation
Lease Term & Rent Amount	Baseline for calculation
Amount Due (Rent + Fees)	Total obligation
Amount Paid / Partial Payments	Cash application tracking
Total Arrears Balance	Net outstanding
Aging Buckets	1–15, 16–30, 31–60, 60+ days overdue
Late Fees Applied	Revenue & compliance tracking
Payment Plan Status	Active, Completed, Defaulted
Collection Actions Taken	Notice sent, agency referral, legal filing
Last Contact Date & Method	Audit trail & fair housing compliance
Expected Cure Date	Forecasting & cash flow modeling

Multi-Tenant PMS Considerations

- **Auto-Calculated Aging:** System must dynamically bucket arrears based on lease terms, grace periods, and payment history.
- **Escalation Workflows:** Trigger automated notices, SMS/portal alerts, and manager assignments based on aging thresholds.
- **Owner Visibility:** Show net arrears after reserves, management fee deductions, and partial payments. Hide tenant PII if needed.
- **Compliance Guardrails:** Flag jurisdictions with strict late fee caps, grace period rules, or fair housing collection restrictions.
- **Accounting Sync:** Push arrears data to AR modules, mark as bad debt when applicable, and support write-off approvals.

Implementation Tips

- Add a "Collections Priority Score" (e.g., high arrears + short lease end = high priority).
 - Enable bulk actions: send notices, generate payment plans, export to collection agencies.
 - Include a "Cure Forecast" column showing projected cash inflow if arrears are resolved.
 - Log all communications with timestamps, channels, and outcomes for legal defensibility.
-

How These Reports Interconnect

- **Unit List → Arrears:** Vacant units with past arrears history inform leasing risk. High arrears units trigger maintenance/turnover priority.
 - **Arrears → Financials:** Feeds directly into Accounts Receivable, Cash Flow, and Bad Debt provisions.
 - **Both → Renewals:** Tenants with clean arrears history get renewal incentives; those with arrears get conditional offers or screening rechecks.
-

Best Practices for Both

1. **Configurable Columns:** Let each client customize visible fields and sort order.
2. **Scheduled Delivery:** Email PDF/CSV daily/weekly to owners, PMs, or accounting.
3. **Audit-Ready:** Every number must trace back to a transaction, lease clause, or system log.
4. **Performance Optimization:** Materialized views or read replicas for heavy portfolio-wide queries.
5. **Tenant Portal Parallel:** Show tenants a simplified version of their arrears/unit status for transparency.

If you're building or evaluating a PMS, these two reports should be **non-negotiable core modules**. They drive daily operations, cash flow health, and portfolio scalability. Let me know if you need field-level schemas, workflow diagrams, or compliance mapping for specific regions.
